Hi {{first name}},

I wanted to share something I think could make a huge difference for your medical practice.

MediQo is an all■in■one medical AI platform that helps clinics answer more calls, reduce admin, improve documentation, and bill more accurately — all while keeping everything secure and fully integrated with your PMS.

Here's what practices get access to:

• AI Phone Receptionists that book, update and cancel appointments, complete pre-consult triage, answer FAQs, and communicate in 110+ languages — all using the clinic's existing phone number.

• Smart MBS Billing with real-time item number suggestions based on clinical context, helping doctors stay compliant and eliminate under-billing.

• MBS Billing Audits that analyze 12+ months of data to recover missed income.

• Automated Patient Education Letters after every consultation, including treatment and dosage instructions.

• Instant clinical answers on patient cases and general medical queries, powered by national therapeutic guidelines and verified medical sources.

• Integrated Telehealth & Documentation AI including real-time AI■scribing (even with headsets), care plan generation, and seamless PMS syncing.

Practices using MediQo report major time savings and cleaner clinical workflows.

• Book a demo: https://calendly.com/mediqo-support/30min
• Sign your clinic up for a free trial: https://calendly.com/mediqo-support/trial

It's absolutely worth taking a look.

Warmly,
{{Your Name}}
